SUMMARY

AI/ML focused software engineer with 7+ years building production systems & a Master of Data Science from UBC. Hands-on experience in Python, PyTorch, LLMs & RAG pipelines, with the engineering background to build reliable ML-enabled products.

EXPERIENCE

Ultimate Kronos Group (UKG) | Lead Software Developer

Dec 2024 – Aug 2025 | Toronto, ON

- Supervised a team of 6 offshore contractors, assigning backlog & production support issues based on priority & risk levels
- Cut regression pipeline runtime from 4h to 1.5h by eliminating redundant data generation & introducing one-click execution
- Owned & maintained a core service responsible for promoting customer configurations from test environments to production
- Migrated deployments from RightScale to GitHub Actions with DevOps, modernizing CI/CD & improving release reliability
- Participated in incident response calls, troubleshooting issues & coordinating fixes across engineering teams

Senior Software Developer (Promoted)

Dec 2021 – Nov 2024 | Toronto, ON

- Helped convert a monolithic application to domain-oriented Java microservices REST architecture
- Reduced defects & high severity incidents by ~30% by analyzing trends & improving triage & routing workflows
- Coordinated cross-team efforts to resolve production incidents & implement long-term stability improvements
- Mentored engineers on escalations & after-hours support, including guiding a QA engineer's transition to a developer role
- Served as interviewer on the Toronto engineering hiring panel for software developer & internship roles

Software Developer (Promoted)

Oct 2019 – Nov 2021 | Toronto, ON

- Developed backend features for a workforce management application using Java, Spring Boot & MySQL
- Designed & implemented RESTful APIs across controller, service & repository layers
- Led the delivery of a cross-team feature updating authentication token workflows across multiple stakeholder teams
- Increased test coverage by 30% adding unit, integration & acceptance tests using Mockito & JUnit in CI/CD pipelines
- Diagnosed & resolved customer escalations & production incidents via root cause analysis & targeted SQL fixes

Ericsson | Radio Software Developer

Oct 2017 – Oct 2019 | Ottawa, ON

- Converted MATLAB prototypes to production C++ for radio firmware, collaborating with systems engineers to debug & validate results
- Prevented shipment of 700+ faulty radio units by coordinating with supply team to intercept & reimage devices within one week
- Developed black box & white box tests using a proprietary Java TestNG-based testing framework

Apple | RF System Integration Engineering Intern

Sep – Dec 2016 | Cupertino, CA

- Improved Wi-Fi throughput rates 10-30% by modifying chipset drivers in C/C++ to calculate & validate throughput
- Reduced automated test runtime from 65s to 17s by integrating new low-level Wi-Fi throughput tests into the test suite
- Presented factory test performance results to executive-level engineering leadership

EDUCATION

University of British Columbia | Master of Data Science (MDS)

2025 – 2026 | Vancouver, BC

- Key courses:** Supervised & Unsupervised Learning, Deep Learning, NLP, Time Series, Data Science Workflows, Statistical Inference, Regression Modelling, Bayesian Reasoning, Data Visualization, Databases & Retrieval
- Academic Representative:** Advocated for assessment fairness & instructional quality using cohort feedback in faculty meetings

University of Waterloo | B.A.Sc. Electrical Engineering (Co-op)

2012 – 2017 | Waterloo, ON

- Dean's List & President's Scholarship | Exchange Semester at Nanyang Technological University, Singapore (Jan – Apr 2016)

SELECTED PROJECTS

- Capstone: Built an interactive PISA data dashboard with ETS using Python, Streamlit, DuckDB & Parquet, processing 1.7M+ student records across 80+ countries to surface equity-focused score distributions for education policymakers
- Engineered a product search tool with a local LLM & RAG pipeline, combining BM25 & semantic search (Python, LangChain, Ollama)
- Created an underwater rover with real-time golf ball detection using OpenCV & Python, achieving sub-second latency
- Developed & published a Python package to TestPyPI, including unit testing, documentation & CI/CD via GitHub Actions
- Designed & deployed an interactive data visualization dashboard in Shiny (Python), from data wrangling through to deployment

TECHNICAL SKILLS

ML & AI: PyTorch, scikit-learn, Hugging Face, pandas, NumPy, SciPy
MLOps & DevOps: Docker, Kubernetes, GitHub Actions, Jenkins, AWS
Monitoring & Observability: Splunk, Grafana, Datadog

Languages: Python, Java, R, C++, SQL
Databases: PostgreSQL, MySQL, MongoDB
Tools: Git, Jupyter, Quarto, Postman, Make
